LUÍS FILIPE MEDEIROS
DE OLIVEIRA E SILVA

CYBERSECURITY / CLOUD SECURITY / DEVSECOPS

Rio de Janeiro, RJ • (21) 99847-8122 • lfmedeiros.rj@gmail.com
lfmos.github.io | github.com/lfmos | linkedin.com/in/luis-filipe-medeiros

PROFESSIONAL SUMMARY

Cybersecurity graduate and current postgraduate student in Cloud Computing Engineering, with a technical background in Telecommunications. Builds hands-on labs in detection engineering, Kubernetes security, automation and DevSecOps pipelines. Practical experience with Python, Linux, Docker, AWS and security controls. Seeking junior opportunities in Cybersecurity, Cloud Security and DevSecOps.

EDUCATION

Cloud Computing Engineering — Postgraduate program
Instituto Infnet | In progress since Oct 2026

Cybersecurity — Undergraduate degree
Estácio de Sá | Completed

Telecommunications — Technical high school diploma
CEFET/RJ

TECHNICAL SKILLS

Security: Detection Engineering, Wazuh SIEM, MITRE ATT&CK;, OSINT, pentesting, hardening, Trivy, Checkov

Cloud & systems: AWS (EC2, SSM), Azure; GCP/GKE fundamentals; Linux, Windows, WSL, SSH

Containers & CI/CD: Docker, Docker Compose/Swarm, Kubernetes, GitHub Actions, GitLab CI/CD

Development & data: Python, FastAPI, Flask, Django, HTML, CSS, Bootstrap, PostgreSQL, Neo4j

Tools: Git, GitHub, Vagrant, VirtualBox, VS Code; troubleshooting and automation

HANDS-ON LAB EXPERIENCE

Defensive security: Controlled simulations, synthetic telemetry, detection rules and event correlation in a lab setting.

Infrastructure: Linux administration and AWS instance operations; containerized application deployments.

Quality & automation: Automated tests, static analysis and CI security checks in personal technical projects.

FEATURED PROJECTS

NEXVIGIL · DETECTION ENGINEERING

Independent lab using Python, FastAPI and synthetic telemetry, with an event correlation/detection engine and documented Wazuh integration. Controlled Purple Team simulations mapped to MITRE ATT&CK; 12 automated tests and Bandit/pip-audit checks.

github.com/lfmos/NexVigil

K8S SECURITY LAB · KUBERNETES

Hands-on comparison of insecure and hardened workloads using Pod Security, non-root containers, read-only filesystems and NetworkPolicy. Locally validated with Minikube/Calico, with 264 Checkov checks passed.

github.com/lfmos/k8s-security-lab

GKE DEVSECOPS LAB · PIPELINES

Reference architecture and pipeline using GitLab CI/CD, Artifact Registry, Workload Identity Federation, Trivy and Kubernetes security controls. Actual GKE deployment remains dependent on a configured cloud environment.

github.com/lfmos/gke-devsecops-lab

SWARM VAGRANT LAB · INFRASTRUCTURE

Four-VM local cluster (one manager, three workers) provisioned with Vagrant/VirtualBox. Docker Swarm, overlay networking, healthchecks, rolling updates, rollbacks and CI validation.

github.com/lfmos/swarm-vagrant-lab

COLLABORATIVE PROJECT

OSINT Lab on AWS (collaborative contribution): assisted with setup and operation of an EC2 environment with Docker, SpiderFoot, Neo4j, PostgreSQL, TT-RSS, SSM/SSH access and operational documentation. Ongoing project; not claimed as solely authored.

SELECTED TRAINING

DIO: AWS Cloud Foundations, Kubernetes Fundamentals, Docker Fundamentals, Cybersecurity bootcamp and DevSecOps fundamentals. Senac RJ: Python Programming. Estácio: Information Security, Cloud and Python development.

LANGUAGES & ACTIVITIES

English — Intermediate • Spanish — Intermediate

Team leadership in stage lighting and volunteer work with live video and sound production.
